FAX NO: 954-527-5002

Island Club I

Att: Marilyn Mammano

1501 SE 15th St.

Fort Lauderdale FL.33316

The installation of (240 L.F.) of seawall footer as follows:

- 1. Clean the base of the seawall and install 5' to 6' AWL aluminum panels to a minimum penetration of 24" or to bearing on rock directly in front of the seawall.
- 2. Footer will be formed at the top using 2" x 10". Sheets will be formed and tied off to prevent sheets from rolling out at time of concrete pour and will be poured as a footer cap to prevent footer sheets from separating from concrete pour. Footer will then be poured using 3,000 psi concrete.
- 3. The entire 240 of rock wall will be pressured cleaned removing all marine-growth and loose grout material.
- 4. The wall will then be faced with marine-grout repairing existing cracks and holes and finished with a masonry brush.
 - a) Sod will be lifted along seawall approximately (2') back from seawall cap (Where accessible) and the soil will be washed in and compacted behind seawall with a high-pressure jet-pump.
 - b) The fill lost will then be replaced and compacted with a high-pressure jet pump and the sod will be placed back in it's original position or to the extent possible..
